	DIMENSIONS AT FACE OF CURB	

NOTES

- The ramp shown on this plan is ideal and assumes optimal roadway geometric design. It assumes a curb height of 6". Adjustments must be made for conditions in the field such as roadway grade, actual curb height, etc.
- The maximum allowable ramp slope is 12H:1V (8.34% grade). The Federal Highway Administration (FHWA) does not accept sidewalk ramps with slopes steeper than 12H:1V. Flatter ramp slopes are permissible. Field verify the forms before pouring concrete.
- To the maximum extent feasible, the ramp cross slope shall not exceed 2%.
- The bottom of the ramp shall have a level area (not in excess of 2% in any direction), 4' X 4'.
- Avoid placing drainage structures, junction boxes or other obstructions in front of ramp access areas.
- Layout 1 is used to provide access to a single crosswalk parallel to the major street. The bid item "Cement Conc. Sidewalk Ramp Type 4C" does not include the adjacent Curb (or Curb & Gutter), the Sidewalk, or the Cement Conc. Pedestrian Curb.
- Curb & Gutter is shown, see the Contract Plans for the curb design specified. See Standard Plan F-10.12 for curb details.
- See Standard Plan F-30.10 for Cement Concrete Sidewalk details, sections, etc.
